

## **Section 7**

### *Ash Disposal*

## *Plan for Sampling, Analysis and Disposition of Ash*

A plan for sampling, analysis, and disposition of the ash generated by the facility (for thermal recovery facilities only). The plan shall include a strategy for ash testing during the test burn phase of construction. Testing shall be in accordance with Delaware's Regulations Governing Hazardous Waste or other testing protocol acceptable to the Department. The plan also shall include a proposal for treatment and/or disposal of the ash. The proposed methods for treatment and/or disposal shall conform to all applicable state and federal regulations.

Clean Earth of New Castle, LLC ("CENC") does not produce ash from its thermal soil remediation operation. However, the facility will periodically remove dusts that collect in the baghouse unit of the thermal treatment units air pollution control system. Any dusts or solids that are removed from the system are appropriately containerize and staged at the facility. CENC will perform a waste determination on the materials collected from the baghouse in accordance with 40 CFR 262.11 and the applicable requirements under the Delaware Regulations Governing Hazardous Wastes. Once the waste determination is completed, CENC will arrange for these wastes to be properly disposed at an offsite facility in accordance with applicable state requirements.
